

Front End Web Developer

Location: Pride Park, Derby, UK

Job Type: Permanent

Salary: £20K to £30K

The Role

Are you a Web Developer with several years of commercial experience with .Net and IIS on multiple devices? Do you know your Websites from your Web Applications? Your JavaScript from your jQuery? Your OO patterns from your OO principles? The rapidly growing DGauge have a career waiting for you in their software development team.

Solutions built on Forms and MVC are just the start of it. We're a growing team that's shaping our processes around our people, not our people around our processes.

From Scrum Master to UX Story Boarder, the ingredients for the role you want to have are waiting, and we have the support and training to make you a success.

If you have a conscientious and professional attitude to your software development, a customer focused definition of success and desire to get experience at the business end of software solutions, get in touch.

The Company

DGauge is a specialist engineering consultancy that provides gauging analysis services to the rail industry for rolling stock, infrastructure and electrification. Our experienced team consists of engineers and software developers some of whom have nearly 40-years' experience in the discipline.

Gauging is the science of fitting a vehicle within or past a structure safely. The objective is to have enough space to prevent a contact (to prevent a train hitting a platform), yet not too much space that it is dangerous (to prevent people from falling down gaps when exiting). As new vehicles get larger and faster, and older vehicles run in new places, the need to model the interfaces more accurately becomes greater.

Why work with us?

Every member of our team makes a difference to the value of the business and the service we provide to our customers.

DGauge aims to provide an exciting and challenging work environment. We encourage new thinking and believe in true innovation. The successful candidate would have the opportunity to work collaboratively with, and be supported by leading industry experts.

Along with a competitive salary package, we also offer a company pension and flexible working and a video training subscription.

Core Responsibilities

- Develop, publish and maintain business critical web solutions based on the objectives of the business and its clients.
- Draw upon all the features of server and client side libraries to effectively display information on multiple devices.
- Apply OO principles and best practice to JavaScript and CSS to produce clean structured UI.
- Acquire knowledge of the business and industry to drive context aware real-world testing and quality assurance to your solutions.
- Use the software development industry's most popular video training service to discover new technologies, and build your leadership skills by sharing that knowledge.

Essential Requirements

- 2+ years commercial web experience (on both MVC and Forms .Net server applications).
- 2+ years commercial web scripting experience.
- 2+ years commercial web styling experience.
- Knowledge of Object Orientated Principles and a dedication to Software Craftmanship.
- Ability to prioritise, troubleshoot and fix technical issues when needed.
- Dedication to improving your team mates skills in addition to your own.
- Ability to communicate complex concepts clearly to technical and non-technical stakeholders.

Desirable Requirements

- Commercial experience of C#, IIS, Angular.js, Web API, RIA Services, AJAX, Charting & D3/SVG.
- Experience of Customer Service(ITIL), Agile, Git.
- Some familiarity with higher-mathematical techniques (e.g. Geometry and Trigonometry).

How to Apply

Please provide the following as part of your application:

- Your latest CV
- Salary Expectations
- Your current notice period
